If $[\text{SCN}]^-$ is added to a solution containing iron(III) ions (Fe^{3+}), a blood red solution is formed due to the formation of $[\text{Fe}(\text{SCN})(\text{H}_2\text{O})_5]^{2+}$. Similarly, Co^{2+} gives a blue complex with thiocyanate. Both the iron and cobalt complexes can be extracted into organic solvents like diethyl ether or amyl alcohol. This allows the determination of these ions even in strongly coloured solutions.

ELCARD – Strong and efficient authentication solution

The eCTD Specification is based on XML technology. The specification for the XML structure is the DTD. To ensure that the DTD has remained unchanged, use a tool to generate and compare the MD5 checksum of your copy with this MD5 checksum. An example of such a tool is WinMD5 (executable for MS Windows). See Readme.txt for installation instructions. The checksum for the eCTD DTD is ...
